

Unleash Your Voices

ZOOM V6

Introducing The V6 Vocal Processor

Packed with professional vocal effects, built-in looper, and our new Formant Pedal, no matter what style you sing the V6 will take your music to the next level.

Command Your Performance

Perfect for live performance, you can easily activate effects and quickly recall your favorite settings.

Voices in Your Head? Not Anymore.

The V6 offers instant access to dozens of studio-grade effects that can be combined to create the right voice for any song.

Find Your Voice

Select your desired Voice Effect from 12 different options ranging from the Unison Effect to Octave Up/Down, to Vocoder. You can even chose Pitch Correct to deliver your EDM sound.

Checkout Vocoder, Whistle, and Talkbox samples:

Craft Your Harmony

Add up to two backing vocals and create your perfect three-part harmony. Based on the key you've chosen, the V6 creates the appropriate harmonic intervals.

Checkout dry vocals compared to Oct Up High Harmony Patch and Choir Harmony Patch:

Extra Sauce

Choose from 10 popular studio effects including classics such as Delay, Chorus, and Reverb. Or go modern with effects like Telephone and Beatbox.

Checkout Chorus, Beatbox, and Telephone samples:

Plenty of Preloaded Patches

With 40 preloaded patches there are plenty of great sounds to choose from right out of the box. Or experiment and create and save your own.

Checkout out dry vocals compared to Slapback John Patch and Oct Down Distortion Patch:

Take Your EDM from the Studio to the Club

KEY – PITCH CORRECT

Select the key of your song and the V6 will process your voice to the nearest pitch within the key. Using the ADJUST knob you can determine how fast the processing is executed to obtain a softer or harsher correction to your original voice.

CHROMATIC – PITCH CORRECT

The V6 will shift your voice to the nearest chromatic pitch.

Checkout Pitch Correct effect sample:

Step to Add Flavor

The V6 is the only vocal processor to use an expression pedal for shifting the formant of your voice. The formant pedal can provide radical changes in vocal characteristics without changing the pitch, delivering an unprecedented level of creativity and exploration.

Checkout Formant Pedal effect sample:

A Mic Designed Just for You

An important component of the V6 is Zoom's innovative SGV-6 mic. The SGV-6 is designed to isolate your voice by suppressing sounds from other instruments on stage. The mic's vocal isolation enables the V6 to process your voice with unmatched accuracy.

Meet Your New Backup Singers

The built-in looper allows up to 3:30 of loop creations. Overdub multiple vocal parts all by yourself. Simply step on the footswitch and off you go.

Let's Hook Up

Your mic, your computer, an expression pedal, whatever it is you need to hook up, you'll find its connection on the V6.

- A - XLR MIC INPUT**
- B - Phantom power switch**
- C - Control pedal input**
- D - USB OUT**
- E - Headphone out / volume control**
- F - XLR Output**
- G - DC Power in**

Outro Caption: "The V6 brings my studio sounds to the stage."
